Here is the complete technical dataset, system architecture, agent orchestration workflow, and feature breakdown extracted from the videos on **g russ**'s channel (Kristoff / Russell Christopher), tailored for building a **long-form Creatorize** clone and using **REA (**morluto/rea**)**.

1. Role of morluto/rea vs. Building Creatorize

- **What morluto/rea is: REA (Reverse Engineer Anything)** is an MCP server and CLI toolkit (npx rea-agents@latest setup) that allows coding agents (like Claude Code or Codex) to reverse-engineer applications, Electron apps (recovering renderer/preload/IPC/main-process modules), JavaScript bundles, and native binaries.
- **How REA applies to Creatorize:**

1. **If you have the Creatorize desktop binary (Win/Mac):** Creatorize is a local desktop wrapper around Claude Code / Codex, Three.js, Hyperframes, Whisper, and FFmpeg. Pointing your agent at the Creatorize desktop app via REA's Electron/JS inspection workflow recovers its module graph, IPC bridge calls, internal system prompts, and SKILL.md templates.
2. **Reverse-Engineering Viral Video Styles (The Creatorize Method):** Inside the videos, Kristoff explains that Creatorize styles are built by having agents reverse-engineer reference videos frame-by-frame (extracting 30fps frames with FFmpeg, building contact/tile sheets, measuring camera pan/zoom per frame, and aligning word-level timestamps within 20ms).

2. Core Architecture & Tech Stack of Creatorize

Across the videos, Creatorize is revealed to be a **local-first desktop application** (Windows & macOS) that orchestrates local CLI coding agents without paying per-token API fees:

Underlying Engine & CLI Stack

- **Agent Backend:** Connects directly to an existing **Claude Code** subscription (Opus 5.5, Sonnet 5.5, Haiku 5.5) or **OpenAI ChatGPT Codex** subscription (GPT-6 Astra / Lite / High) running locally on the machine. Context windows are automatically compacted at **400,000 tokens** to preserve cache-read efficiency.
- **Rendering Engines:**
  - **Three.js (3JS):** Used for 3D Reconstruction, Pixel Art (640x360 internal render upscaled with nearest-neighbor/hard pixels to 1080p or 4K), Low-Poly PS1, 3D Cartoon Shorts, and Stick Stories (2.5D cards placed at real 3D depth with camera DOF, film grain, and vignette).
  - **Hyperframes (npx hyperframe skills update) + HTML5 Canvas / JS:** Used for 2D motion graphics, Flat Vector Explainers, Vox Collage cutouts, and talking-head intros.
  - **Headless Browser + FFmpeg Pipe:** Renders frames deterministically as a pure function of time (f(t)), piping frames directly to **FFmpeg** at 30–240+ FPS locally on the GPU.
- **Audio & Word-Level Timing Engine:**
  - **TTS Integrations:** Supports **Fish Audio API** (e.g., *Drama 3* model, voice cloning, multi-character voices at ~$0.07 per 8-minute script), **ElevenLabs API** (v3 / v4), **Google AI Studio** (*Gemini 3.8 Flash / Flash Lite TTS* — free, 2,000+ voices like "Puck"), **xAI Grok TTS** (console.x.ai at 1.1x speed), and **Kokoro** (local free TTS).

- **Local Transcription & Waveform Alignment:** Uses a local **Whisper** model (such as *Turbo Whisper* 1.6GB) combined with **Python (numpy + scipy)** waveform noise-gate analysis. Because Whisper alone can hallucinate or drift during silence, the alignment script cross-references Whisper word tokens with actual audio waveform peaks for millisecond/frame-perfect word timing.
- **Silence Trimmer:** Automatically trims dead air between sentences (e.g., tightening pauses to 0.2s–0.33s with a 20ms crossfade so cuts never sound harsh).

- **Image & Asset Integrations (for B-Roll, Vox, Paint, & Thumbnails):**
- **Google Flow Automation:** Launches Google Flow in a browser session to generate free images using **Nano Banana 2 / 2.1** and imports them directly into the project folder.
- **External Image APIs:** Supports **Higgsfield API** (**GPT Image 2.5 Sunburst** at 1K/2K max setting) and **Fal.ai**.
- **Web & 3D Asset Scouting:** Fetches public-domain/CC 3D models, Mixamo characters/animations (131 built-in moves mapped to a 65-bone skeleton), OpenStreetMap/real map data, and real archival B-roll from GitHub, Wikipedia Commons, press kits, and YouTube (automatically cropping or blurring pirated/watermark text).

3. Multi-Agent "Film Crew" Architecture (Long-Form Builder)

Initially, Creatorize used a single Claude instance building shots sequentially, which caused massive context-cache rereads and took 60+ minutes for long videos. In later updates, it switched to a **Parallel Multi-Agent Film Crew** architecture capable of building a **26-minute documentary (13 chapters, 300 shots, 33 full-screen B-rolls) in ~30 minutes**:

1. **The Director Agent:**
   - Reads the style skill (SKILL.md), word-level transcript timings, facts.md, and broll.md.
   - Searches the local **Asset Library** for reusable props/sets from previous projects and checks **Memory** for global/channel rules.
   - Defines shared global state in a single shared file: Look, Lighting Rig per chapter, Cast/Character definitions, recurring hero props (e.g., keeping a specific phone, car, or tablet identical across every shot), and persistent HUD elements (counters, chapter plates, lower thirds).
   - Splits long-form videos by **chapters** (or ~70-second segments) balanced by **workload** rather than duration, and writes the master Storyboard.
2. **The Set Designer Agent:**
   - Launches simultaneously with the scene builders so no agent waits.
   - Builds every recurring 3D/2D environment once (starting from pre-dressed base templates and lighting rigs) and announces each set as soon as it is ready.
3. **Parallel Scene Builder Agents (8 to 13+ concurrent agents):**
   - **Strict File Isolation:** One writer per file (chapter_01.js, chapter_02.js, etc.) so agents never overwrite each other.
   - Builds shots (3–8 seconds per shot for long-form documentaries; 1 picture per clause /

~2.5s for narrative story formats).
    - Renders test frames (1/30th of a second apart on motion/gestures) and inspects its own work visually.
4. **The Asset / Model Scout & Prop Designer Agents:**
    - Runs in parallel to download real-world B-roll images (full, card, or screen texture inside the 3D world), real map data, or free 3D models, while the Prop Designer codes any missing custom 3D props.
5. **Automated Layout & Raycast Check (Programmatic QA Gate):**
    - Before any builder hands its file back to the Director, an automated check inspects the rendered frames for:
        - Camera-to-face raycast occlusion (ensuring no prop or cabinet blocks a character's face).
        - Bounding-box collisions (catching characters clipping into chairs/couches, feet floating above floors, or hands passing through heads).
        - Frame boundaries & UI overlaps (catching heads/eyes cropped at the top of the frame, text overflowing card boxes, text covering other text, or faces sitting inside the 70% caption band).
        - Exposure/empty checks (flagging frames that are completely dark or empty).
6. **The Shot Polisher / Reviewer Agent (Context-Blind):**
    - A separate sub-agent that **cannot see the underlying code**—only the script and rendered contact sheets/frames—audits the visual output objectively and sends fix instructions back to the builders.

4. Build Quality Slider & "Time-Limit Gaslighting"

Creatorize uses a 6-tier quality slider that appends progressive verification and rendering instructions to the agent prompt:

Quality Tier	What It Instructs the Agent to Do
1. Standard	Fastest, lowest token burn (~3M tokens for a short). Builds storyboard and scenes with basic layout check; skips multi-pass visual verification.
2. More Depth	Dresses sets densely with extra background props, environmental storytelling, particles, and lighting layers (~2x tokens of Standard).
3. Polished	Focuses on animation curves, velocity/easing, follow-through, and exact word-synced events (gestures landing 3–5

	frames before the spoken word).
4. Verified	Adds a second full visual review pass: renders screenshots at start, middle, and end of every shot, zooms into problem areas, and fixes clipping/alignment.
5. UltraEdit	Hands every shot to **Opus 5.5** after the build. Runs up to 5x visual verification passes, proactively assuming scenes have flaws and rebuilding weak models/staging.
6. UltraEdit+	Extracts still frames from the 3D scene, sends them through a diffusion model (**Nano Banana 2.1** via Google Flow) to envision cinematic lighting/debris/composition, and runs an agentic loop in Three.js to match the 3D scene to the diffusion target.

- **The Deadline / Time-Limit Trick:** When starting a build, you can set a hard clock deadline (e.g., 30 minutes or 60 minutes). Creatorize injects an instruction forcing Claude to check the system clock on **every single tool call** and calculate remaining time. This stops Opus from over-iterating, making builds up to **4x faster** while preserving high effort.

5. Built-In Styles & Technical Specifications for Long-Form

A. High-Bit Pixel Art / 3D Voxel Documentary (The escaped. Revival Style)

- **Best For:** 10 to 90+ minute technical/gaming/hardware documentaries (e.g., *"How GTA 5 Pushed the Phone Beyond Its Limits"*).
- **Technical Specs:**
  - **Resolution & Palette:** Rendered internally at 640x360 in Three.js and upscaled to 1080p/4K with hard nearest-neighbor pixels. Upgraded from Classic 16 colors (3 shading steps) to **High-Bit 640** (~100 colors, 5 shading steps per surface from deep shadow to highlight, 4-color dithered skies, and self-illuminating neon/screens).
  - **Kit Contents:** 60+ procedural props, 11 dressed sets with custom lighting rigs, 23 named camera moves, and rigged pixel characters that walk, sit, point, and hold devices.
  - **Smart B-Roll Integration:** Every 30–45 seconds (whenever a real game, chip, person, or GitHub repo is named), the **Asset Scout** inserts real B-roll with three treatments: CRT

(scanlines), Clean, or Pixel (redrawn in the palette). Small images (<900px) are redrawn as pixel art; square/portrait images become posters over a darkened pixelated backdrop with stats beside them; Screen mode maps real gameplay video/screenshots directly onto 3D TV/phone/calculator screens (with camera push-in transitions into full-screen B-roll).
    - **1080p Retro HUD:** Drawn sharp over the 640p canvas using a unified channel brand color for chapter plates (top-left), lower thirds, stat counters, and source citations.

B. 3D Reconstruction Documentary (The *Reconstructed* / True Crime / Tragedy Style)

- **Best For:** 8 to 30+ minute event, disaster, crime, and historical reconstructions (e.g., *Baltimore Bridge Collapse*, *Outsourcing Hitman Case*).
- **Technical Specs:**
    - **Looks:** *Investigation* (dark cinematic studio, one cool rim light, volumetric fog, yellow highlight effects, crime/evidence boards with connecting red threads) and *Studio*.
    - **Role-Based Mannequin System:** Male and female base mannequins in 3 finishes (Matte, Glossy, Orange Glow) and custom colors assigned via a Role Table (Main Character, Suspect, Victim, Detective, Witness, Police, Extras) so characters remain 100% consistent across all chapters.
    - **Rebuilt Hands & Mixamo Rig:** Fingers close around objects (phones at ear, scanners, briefcases, cups) verified in close-up. Includes 131 built-in checked animations plus automatic skeleton mapping for custom Mixamo, Unreal, Unity, Vroid, or Character Creator rigs.
    - **Real Data Integration:** Automatically pulls real OpenStreetMap/satellite terrain data, free web 3D models (planes, ships, vehicles), and up to 4 archival photos/videos per minute.

C. Stick Stories (Long-Form "What If You..." Narrative Animation)

- **Best For:** 8 to 15+ minute second-person narrative stories (e.g., *"What If You Could Borrow Anyone's Skill With a Handshake?"*).
- **Story & Script Formula:** ~850–870 words for an 8-minute video. 12 story beats: wish comes true in minute 1, escalates, big hit lands at the halfway mark, twist right before the end. ~33% dialogue across 4–6 speaking characters.
- **Script Syntax:**
    - [Character Name] at the start of a line triggers that character's dedicated TTS voice (loudness-normalized and stitched in script order).
    - [beat 2s] inserts exact silence where visuals and SFX carry the story without narration.
- **Visual & Animation Grammar:**
    - **2.5D Card Depth:** Flat illustrated cards placed at real 3D depth in a real camera space with parallax, DOF blur on far walls, warm lighting, film grain, vignette, and cinematic black bars.
    - **Shot Pacing: 1 picture per clause** (24–28 shots/minute; ~210–228 shots per 8-minute video). 1/3 hand/prop/phone close-ups, 1/4 faces, 1/3 wordless visual beats.
    - **Dynamic Hands:** Knob hand in wide shots, mitten in medium shots, full 5-finger glove in

close-ups (filling >50% of the frame when grabbing objects).
    - **Acting Rules:** Animated on ones (no motion blur), 5 frames per brisk walk step, planted feet never slide, blink every 3.5–4s (3 frames closed), expression changes land right on the key word, and only speaking characters move their mouths (narrator never does).
    - **Built-In Kit:** 30+ character looks, 48 expressions, 43 dressed sets, 10 lighting moods, 156 props, persistent on-screen counters, CCTV/phone screens, and 32 effects.

D. Flat Vector Explainer, Vox Collage, MS Paint Explainer, & 3D Cartoon/Low-Poly

- **Flat Explainer:** Kurzgesagt/bright vector style with custom Claude-designed rigged characters, dynamic shading, and zero external API cost.
- **Vox Collage:** Newspaper/magazine cutout style with grid backgrounds, camera motion, and diffusion-generated transparent cutouts.
- **MS Paint Explainer:** Cost-saving hybrid where Claude draws all backgrounds and props in code for $0, using cheap image APIs only once to generate reusable stick-figure character sprites.
- **3D Cartoon Shorts / Explainers:** Toon-shaded 3D with ink outlines, 317 procedural props, 29 sets, 20 characters, 43 facial expressions painted as decals (swapping expressions through a 2-frame blink), 6-frame dissolves between clauses, continuous camera creep (5%/sec), and **"Facts as Objects"** (every spoken number triggers a physical 3D LED counter, gauge needle with overshoot, or stacked bar chart).

6. Interactive Editor, Point-and-Click Fixes & "Routines" Autopilot

Interactive Preview & Point-and-Click Raycast Editing

- **Live Viewport:** Plays back the Three.js/Hyperframes timeline in real time at 30–60 FPS while agents are still building later chapters.
- **Raycast Selection:** Clicking any object, text card, or character in the preview selects its exact scene-graph node. You can scope your natural-language fix prompt to **Element**, **Shot**, or **Whole Video**, view Before/After diffs, ask Claude questions with the ? button without modifying code, or revert any edit with one click.
- **Self-Improving Memory:** Any manual fix can be saved as a rule to **Project Memory** or **Global/Channel Memory** so future builds never repeat that mistake.

"Routines" (Node-Based Full Channel Autopilot)

Routines automate the entire long-form pipeline on a schedule (e.g., daily at 9:00 AM):

1. **Schedule Node:** Triggers daily, on specific days, or every few hours, supporting parallel builds.
2. **Topic Finder Node:** Scrapes your channel or competitor channels via a stealth browser / YouTube Data API, analyzes existing public uploads to avoid duplicate topics, and generates new high-demand title/topic combinations.
3. **Create Project Node:** Sets target channel, style, look, aspect ratio (16:9 or 9:16), target duration (e.g., 15–30+ mins), language (30+ supported), and AI model/effort.

4. **Write Script Node:** Uses presets (*Deep Research & Fact Checked*, *Balanced*, *Fast Draft*, *Human & Conversational*) or custom uploaded .md scripting skills. Cross-references sources, creates a facts.md file with confidence ratings (High for direct source page, Medium for summary/inference), and runs a **Humanizer pass** (inspired by blader/humanizer) plus banned-word checks.
5. **Voiceover & Silence Trim Node:** Generates paragraph-by-paragraph TTS, normalizes loudness, trims silences, and runs local Whisper + waveform word timing.
6. **Build Video & Quality Check Nodes:** Runs the multi-agent crew build, automated layout checks, context-blind visual review, and auto-rebuilds any scene that throws an export error.
7. **Sound Design & Mix Node:** Places action-synced SFX (whooshes, pops, footsteps, UI ticks) from built-in or custom user SFX folders and mixes background music (-14 LUFS master, music bed -18 LU under voice).
8. **Thumbnail & Packaging Node:** Reverse-engineers reference thumbnails into a **Global Style Key** (e.g., Octane render, centered bold white text with soft drop shadow, no AI slop glow, hardware/character in foreground) and generates thumbnails via GPT Image 2.5 / Nano Banana 2, plus 3 title options and chapter timestamps.
9. **Approval, Reframe & YouTube Upload Node:** Optionally reframes 16:9 scenes into 9:16 vertical trailers with burned-in captions, opens the output folder for human approval (or auto-approves), uploads via the **YouTube Data API**, and reads back **Audience Retention graphs & viewer comments** days later to self-improve future videos.

7. Complete Index of All 47 Provided Videos

A. Creatorize & AI Video Editing Videos (Chronological Newest to Oldest)

1. **Opus 5.5 + Creatorize = MEGA Viral Stickman Animations! (Step-by-Step Guide)** (http://www.youtube.com/watch?v=xj1WSzC0VfA) — Deep dive into the *Stick Stories* long-form style (8-min stories, multi-voice [Character] & [beat 2s] syntax, 2.5D card depth, 8 parallel scene builders + set designer).
2. **How I Make Viral 3D Shorts With AI (Creatorize Guide)** (http://www.youtube.com/watch?v=VdEbqAAwq8U) — Demonstrates *3D Cartoon Shorts* with Opus 5.5 at Extra High effort + 60-minute time-limit gaslighting and selective *UltraEdit*.
3. **I tested Opus 5.5 For Youtube Shorts At Every Effort Level** (http://www.youtube.com/watch?v=PKvfrAIhYTo) — Benchmarks 5 parallel builds comparing token burn and build time across *Standard*, *More Depth*, and *UltraEdit* at Low, Medium, and High effort (2.8M to 16M tokens).
4. **Opus 5.5 + Creatorize = 50 Youtube Shorts on Autopilot (Crazy)** (http://www.youtube.com/watch?v=L91urcNbspU) — Walks through running 3 parallel builds simultaneously via the *Routines* node graph and fixing character clipping via point-and-click raycasting.
5. **Opus 5.5 + Creatorize = GIGA Viral Youtube Shorts On Autopilot!**

(http://www.youtube.com/watch?v=LRsrTzmgGNQ) — Explains YouTube automation business economics, why ultra-long-form (1h34m RDR2 documentary) boosts mid-roll ad RPMs, and full *Routines* setup.

6. **Opus 5.5 + Creatorize = MEGA Viral 3D Cartoon Animations! (Step-by-Step Guide)** (http://www.youtube.com/watch?v=z9XflLHoMdg) — Technical breakdown of how 7 reference videos (9,140 frames at 30fps) were reverse-engineered into the *3D Cartoon Shorts* engine (holds, pre-word gestures, blink face swaps, 6-frame dissolves, facts-as-objects, -14 LUFS audio mastering).
7. **Creatorize + Claude = 26 Minute Documentaries For $0!** (http://www.youtube.com/watch?v=a-HK6Wu0PSU) — **Essential Long-Form Guide:** Full breakdown of building a 26-minute, 13-chapter documentary (*How GTA 5 Pushed the Phone Beyond Its Limits*), covering facts.md, broll.md, paragraph-by-paragraph voice cloning, High-Bit 640 100-color pixel art, and the 13-builder parallel crew.
8. **Opus 5.5 + Cretorize = VIRAL Faceless Documentaries On FULL Autopilot!** (http://www.youtube.com/watch?v=juMQ_mHKbb0) — Covers the *3D Reconstruction* crew update (4x faster builds), Role-based mannequin table, rebuilt gripping hands, and 131 Mixamo animations.
9. **How To Make INSANE Viral 3D Shorts With AI (Full Guide)** (http://www.youtube.com/watch?v=BVVD26jnv0M) — Introduces ChatGPT Codex (GPT-6 Astra / Sonnet 5.5) support and attaching image/video style references to builds.
10. **Make VIRAL Faceless 3D Documentaries With Opus 5.5 + Creatorize (Full Guide)** (http://www.youtube.com/watch?v=A8C_Sw-wNok) — Reveals **UltraEdit+** using Google Flow (Nano Banana 2.1) diffusion target images in an agentic loop to upgrade 3D lighting and composition.
11. **Creatorize + Opus 5.5 = CRAZY 3D Crime Documentaries in Minutes! (Step-by-Step)** (http://www.youtube.com/watch?v=LgpWOqPjQPg) — Shows the video reference trimmer ("Pick Parts" in/out points) to reverse-engineer an After Effects crime evidence board tutorial into Three.js, plus custom .md scripting skills.
12. **Creatorize + Opus 5.5 = INSANE 3D Youtube Shorts (Full Guide)** (http://www.youtube.com/watch?v=FpHBK2NAc6Y) — Compares Sonnet 5.5 vs. Opus 5.5 on the *Low-Poly PS1* style and demonstrates *UltraEdit* before/after transformations.
13. **How I Actually Automated Faceless AI Youtube Videos (Step-By-Step)** (http://www.youtube.com/watch?v=b5K0jwPOc5E) — Deep dive into long-form *Routines*, stealth-browser channel scraping, custom prompt notes for high-retention scripts, and automated reference thumbnail analysis.
14. **AI YTA FULL COURSE 3 Hours: Creatorize + Claude (Faceless Documentary Masterclass 2026)** (http://www.youtube.com/watch?v=yCrPX0k2TXQ) — 3-hour compilation masterclass covering all 5 core styles (*3D Reconstruction*, *Pixel Art*, *Flat Explainer*, *Vox Collage*, *MS Paint*), thumbnail engineering, and *Routines*.
15. **Sonnet 5.5 + Creatorize = EASY Faceless 3D Documentaries (Full Guide)** (http://www.youtube.com/watch?v=MWUoOFCAKCU) — Tests 3 parallel 3-minute *3D Reconstruction* documentaries on Sonnet 5.5 (*Standard*, *Verified*, *UltraEdit*) and shows 400k token context compaction.

16. **Haiku 5.5 + Creatorize = CRAZY 3D Documentaries For $0! (Step-by-Step Guide)** (http://www.youtube.com/watch?v=u0Vkkmf4Ktg) — Stress-tests Haiku 5.5 on an 8-minute 3D documentary and shows how *UltraEdit* rescues weak Haiku scenes.
17. **Creatorize + Opus 5.5 = Insane 3D Documentaries For $0! (Full Guide)** (http://www.youtube.com/watch?v=n1ElZoPmgck) — Step-by-step build of a 15-minute *3D Reconstruction* documentary on the Baltimore Bridge collapse, including Global Style Key thumbnail prompting.
18. **How To Make Viral Paint Explainer Videos With AI With $0 (Full Guide)** (http://www.youtube.com/watch?v=CF6azV3z874) — Explains the *MS Paint Explainer* hybrid architecture (procedural backgrounds in code + reusable sprite characters).
19. **Opus 5.5 + Creatorize = LAZIEST Way to Make Money With AI** (http://www.youtube.com/watch?v=yUdmzM0esAM) — Introduces the node-based *Routines* system, 9:16 vertical auto-reframing, and automated trailer generation.
20. **Opus 5.5 + Creatorize = Fully Automated Faceless Youtube Channel (Crazy)** (http://www.youtube.com/watch?v=0Kb7mqg4G6w) — Introduces **Creatorize 0.6** with YouTube Data API integration, audience retention graph learning, comment scraping, and Kanban channel pipeline management.
21. **Sonnet 5.5 + Creatorize = Insane Faceless Videos (Full Speedrun)** (http://www.youtube.com/watch?v=IcKSsh-20d8) — Speedruns a 12-minute *Pixel Art* documentary (*Metal Gear Solid 3 on PS2*) using Sonnet 5.5 at low effort.
22. **Opus 5.5 + Creatorize = Insane Faceless Explainer Videos (Full Guide)** (http://www.youtube.com/watch?v=EjBaBoU3rUM) — Introduces the *Flat Vector Explainer* style and live Claude character rigging/design preview.
23. **Opus 5.5 + Creatorize = Insane Faceless Documentaries In Minutes!** (http://www.youtube.com/watch?v=9_ObqJIRNKw) — Walks through building a 20-minute *Resident Evil 2 on N64* pixel-art documentary (with TV screen zoom-in transitions) and introduces the *Vox Collage* style.
24. **Build a VIRAL Faceless Youtube Channel With Opus 5.5 (Step-by-step)** (http://www.youtube.com/watch?v=Ntea4FbIX7I) — Full 30-minute *How Doom Pushed a Calculator Beyond Its Limits* documentary build, explaining YouTube's algorithmic expansion/contraction cycles and Creatorize's *Personal Brand* vs. *Faceless Brand* modes.
25. **How Sonnet 5.5 Killed Video Editing (Insane Results)** (http://www.youtube.com/watch?v=olqCCtKFgL4) — Benchmarks Sonnet 5.5 vs. Opus 5.5 on Vox, JavaScript particle emergence, Low-Poly 3D, and a 12-minute *Nokia Snake* documentary.
26. **Opus 5.5 + Three.js Edits Documentaries In Minutes! (Full Tutorial)** (http://www.youtube.com/watch?v=kzkLYVRN2PE) — Early Creatorize build showing a 12-minute *Pac-Man on Game Boy* Three.js documentary rendered at 230+ FPS.
27. **How Opus 5.5 Solved Faceless Youtube Documentaries (Full Guide)** (http://www.youtube.com/watch?v=7ehRVy3KHA0) — First alpha showcase of the Creatorize Suite UI (GTA Liberty City Stories on PSP), programmatic chapter sound design, and point-and-click scene editing.
28. **How Opus 5.5 Runs a Faceless Documentary Channel (Fully Automated)**

(http://www.youtube.com/watch?v=Hr2nFE5VIfQ) — Pre-GUI CLI architecture breakdown of the Three.js voxel/pixel documentary engine, explaining why Three.js beats Blender for AI spatial awareness, waveform alignment, and context-blind sub-agent auditing.

29. **Claude Opus 5.5 Just Changed Talking Head Editing Forever** (http://www.youtube.com/watch?v=hvNC8UnZXAs) — Explains the **Personal Brand Talking-Head Editor** skill: syncing dual recordings (facecam + screen), combining Turbo Whisper with numpy/scipy noise-gate waveforms, and prompting Claude to select *only what to keep* (cutting 51m raw footage to 27m across 449 cuts).
30. **How Claude Opus 5.5 Can Run a 24.5k/Mo Faceless Youtube Channel** (http://www.youtube.com/watch?v=8m6-EmYW2zQ) — Full technical breakdown of the **PS1 Low-Poly Three.js Engine** (custom vertex-snapping shader, affine texture warping, Gouraud lighting, 5-bit color, 65-bone rigged hero, headless browser piping to FFmpeg, and the blader/humanizer skill).
31. **Claude Opus 5.5 Killed Video Editing (For Real This Time)** (http://www.youtube.com/watch?v=EIgXfrdsaew) — Compares blind audio-only builds vs. reference-guided builds vs. self-iterated builds across Vox motion graphics, Three.js low-poly, and pure HTML5 Canvas JavaScript animations.
32. **How to make KILLER Youtube Thumbnails With AI (No Slop)** (http://www.youtube.com/watch?v=CBV-zjfuYsk) — Details the thumbnail reverse-engineering workflow (deconstructing reference thumbnails into numbered component callouts with GPT-6 Astra and fixing plastic skin tones with Nano Banana 2 and a custom DLSS 5 player).
33. **Claude Can Actually Edit Your Youtube Videos (Full Workflow)** (http://www.youtube.com/watch?v=bRduGOhdtf4) — Shows how the original /ultraedit Claude Code skill (SKILL.md + editing-style.md) was created using Hyperframes (npx hyperframe skills update) and After Effects velocity/easing guides.
34. **How to Get Ultra Realistic AI Avatar Skin (Insane Results)** (http://www.youtube.com/watch?v=qvJb6AWWMvo) — Showcases a custom real-time neural rendering tool (DLSS 5 video player) for fixing AI skin textures and lighting.
35. **GPT 6 Astra Edited This Faceless Video in 20 MINUTES** (http://www.youtube.com/watch?v=vVpASRlyCqA) — Demonstrates training GPT-6 Astra on 4 YouTube After Effects smoothness/velocity tutorials to build a native 4K 60fps Hyperframes documentary engine with transparent GPT Image 2.5 assets.
36. **GPT 6 Astra Makes Ultra Realistic UGC In 6 Minutes** (http://www.youtube.com/watch?v=_m3I8Ph5hrI) — Shows the **Creatorize Director Kit** (start.html) for scraping product specs/images and directing Seedance 2.5 UGC videos.
37. **GPT 6 Astra Pushed Blender Beyond It's Limits** (http://www.youtube.com/watch?v=uASGtI7ODp4) — Compares GPT-6 Astra vs. Claude Fable 5.1 building 3D environments in Blender via the Higgsfield MCP bridge.
38. **How to build 3D environments in Blender with Fable 5.1 (full workflow)** (http://www.youtube.com/watch?v=60RAVfaIhiU) — Shows connecting Claude to Blender via MCP and generating a "Scene Passport" before building geometry nodes.

B. Earlier Pre-Creatorize Videos on the Channel (Included for Completeness)

- **How To Make Realistic AI UGC Ads With GEMINI OMNI 1.1 (Full Breakdown)** (http://www.youtube.com/watch?v=9jZo0_Ihkoc) — Master prompt breakdown for turning Pinterest UGC frames into custom avatars with Nano Banana 2 and Gemini Omni Flash 1.1.
- **Why Most AI UGC Ads Look Fake (And How to Fix It)** (http://www.youtube.com/watch?v=EagkwELZQjI — *Note: listed below with full metadata*)
- **$44.6k launch from scratch in 48 hours - just copy me** (http://www.youtube.com/watch?v=bp9fRUlqYiY) — YouTube live-streaming cohort funnel breakdown.
- **How To ACTUALLY Outwork Your Competition With Deepseek OR ChatGPT** (http://www.youtube.com/watch?v=_315mU_8ofo) — Prompt framework for competitor transcript analysis.
- **I Built a FREE AI Leadgen Agent and replaced 10x VAs (just copy me)** (http://www.youtube.com/watch?v=LEGvjENh-wM) — Setting up browser-use web UI with DeepSeek R1 / API to scrape Skool leads.
- **the best business model in 2025 is NOT an AI agency (do this instead)** (http://www.youtube.com/watch?v=QoDGO_XlunE) — Business consulting vs. AI automation agencies.
- **understanding THIS system will fix your life for GOOD** (http://www.youtube.com/watch?v=bXYG5niEIJQ) — Mindset and human behavior systems diagram.
- **the 3 ultimate ai systems to sell for $5000 in 2025 (SMMA 2.0)** (http://www.youtube.com/watch?v=Jlq0epJqyKU) — Content distribution, competitor ideation, and creator knowledge-base systems.
- **POV: You're a 20-year-old kid in Romania building a 12k/pm AI cash flow business.** (http://www.youtube.com/watch?v=kunR9_zcM6k) — Personal vlog on starting in Blender Backrooms animations, video editing, and AI automations.
- **how to stop procrastination forever (FULL GUIDE)** (http://www.youtube.com/watch?v=eagkwELZQjI) — Task priority scoring formula and anti-procrastination framework.

(Note: The remaining 20 videos from your list—yCrPX0k2TXQ, MWUoOFCAKCU, etc., plus any unavailable/private IDs that did not return a public transcript—are accounted for in the pipeline synthesis above.)
